Art Unit: 2121

A method and apparatus for producing a keyword dictionary using a computer includes inputting a user's necessity or a user's non-necessity for each of pieces of information data, wherein one or more keywords are attached to the information data. A summed necessity value relating to the user's necessities inputted for the pieces of information data and a summed non-necessity value relating to the user's non-necessities inputted for the pieces of information data are calculated. A difference between the summed necessity value and the summed non-necessity value for each of the keywords is calculated, and a predication value predicting a user's necessity degree for each of the keywords according to the differences, respectively, relating to the keywords, is calculated. Each prediction value calculated is assigned to the corresponding keyword.

Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee. Authorization for this formal examiner's amendment was given in telephone interviews with Mr. Christopher W. Brody and by fax on 2/23-24/05.

Examiner's Statement of Reasons for Allowance
